

Numerical Anchors (dimensionless fits):

$$\alpha^{-1} \approx \varphi^4 e^3 = 137.668 \text{ (0.46\%)}$$

Inset V(R)

$$m_p/m_e \approx 6\pi^5 = 1836.118 \text{ (1.8\times 10^{-5})}$$

Main Compactification Diagram

$$m_e/M_P \approx \varphi^{19} \pi^{-53} = 4.186 \times 10^{-23} \text{ (1.8\times 10^{-4})}$$

Hypothesis: Proton/electron ratio

$$m_p/m_e \approx 6\pi^5$$

Interpretation:

- '6' = six compact dimensions
- ' π^5 ' = five winding directions

Thus ratio = multiplicity $\times$ geometric volume factor.
